MacroAsia Associate Lufthansa Technik Philippines Breaks Ground on New Clark Base Maintenance Facility

CLARK, PAMPANGA, Philippines - 6 August 2026 - MacroAsia Corporation ("MAC"), through its associated company Lufthansa Technik Philippines, Inc. ("LTP"), marked a significant milestone with the groundbreaking of a new aircraft base maintenance facility at Clark International Airport.

The development forms part of LTP's planned expansion of its maintenance, repair, and overhaul ("MRO") capabilities in the Philippines and is expected to strengthen the country's position as a competitive aviation services hub in the Asia-Pacific region.

The new facility will be constructed on an approximately 157,000-square-meter site and is targeted to commence operations in 2028, subject to the completion of construction, regulatory approvals, and other customary project requirements.

Once operational, the Clark facility will serve as LTP's second major base maintenance location in the Philippines, complementing its existing operations at Ninoy Aquino International Airport in Manila. LTP has provided aircraft maintenance services in the country for more than 25 years.

Designed primarily to support widebody aircraft maintenance, the facility is expected to include dedicated aircraft painting and non-destructive testing capabilities. It is being developed to accommodate selected Airbus and Boeing widebody aircraft, with planned future capabilities for aircraft types such as the Airbus A350 and Boeing 787.

The groundbreaking ceremony was attended by representatives of LTP, MacroAsia, project partners, government agencies, and other aviation industry stakeholders.

The project reflects the continuing partnership between MacroAsia and Lufthansa Technik AG and their shared objective of developing world-class aviation maintenance capabilities in the Philippines.

Forward-Looking Statements

This press release contains forward-looking statements, including statements relating to the construction, completion, commencement of operations, capabilities and anticipated benefits of the new facility. These statements are based on current plans, estimates, expectations and assumptions and are subject to risks, uncertainties, regulatory requirements and other factors that may cause actual developments or results to differ materially from those expressed or implied.

MacroAsia Corporation undertakes no obligation to update any forward-looking statement, except as may be required under applicable laws, rules and regulations.
